To Serve and Protect

Purpose: an enclosure to hold objects people do not usually think they need but later depend on when the time arises.

The Vitabot maintains and attends for the user. It is specially crafted to ensure that the users receive maximum amount of care, servitude, protection, and fun. The bot can be used in various ways and can be utilized by everyone.

What's in a Vitabot?

The encasement comes in various sizes and can hold various things.

BANDAIDS: Children love to play recklessly and can injure themselves easily. The Vitabot ensures that they carry bandaids at all times just in case they get boo-boos! They just place bandaids into the enclosure and clip it onto their backpack. It is now a functional keychain with a hidden component. Finding a convenient and sanitary place to carry bandaids is challenging and people usually do not carry bandaids on them at all times. Bandaids could be carried in wallets or backpacks, but these locations may not be the most sanitary. This can also apply to other objects such as safety pins, bobby pins, floss, daily pills, and more.

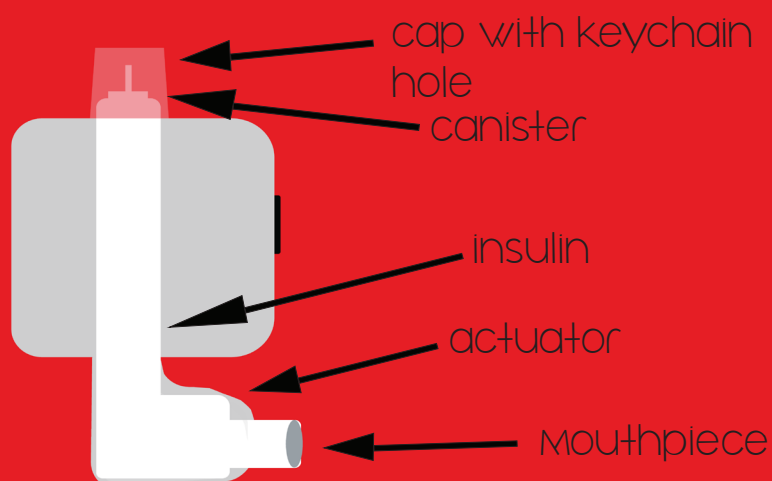

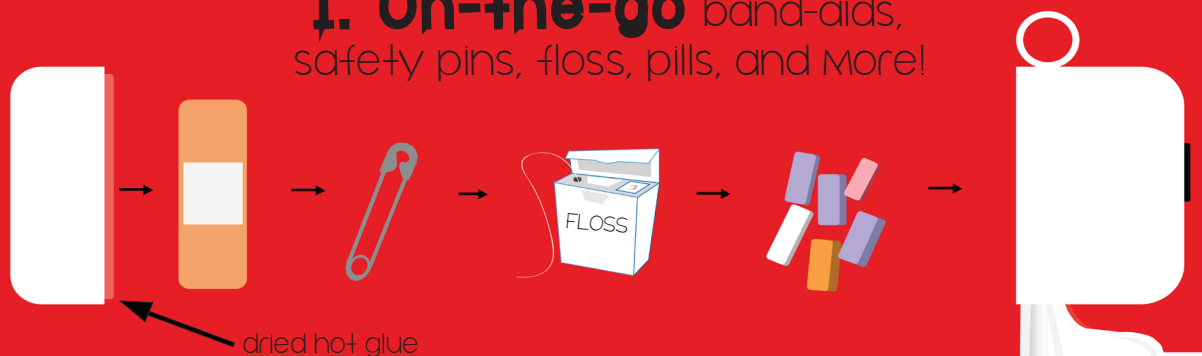

INHALERS, EPI PENS, & BLOOD GLUCOSE METERS: The most common use for Vitabot is for children and teens with asthma, serious allergies, or diabetes. In these cases, Vitabot encloses inhalers, EpiPens, and blood glucose meters so that children and teens have a much stylish and popular container for their medicine. This will incite more enthusiasm and confidence in the kids and decreases the chances of them forgetting their life saving medicine at home. Teenagers will also be saved from embarrassment when they have to administer their medicine in school or public. Furthermore, bee stings or food allergies could occur at any moment. Placing the EpiPen in an easily accessed and portable container can greatly decrease the number of doctor visits and can definitely save lives.

Who is Baymax?

Baymax is a character from Disney's movie **Big Hero Six**. The movie is set in a futuristic city called San Fransokyo where Hiro battles an evil villain with the help of Baymax, an inflatable robot that scans injuries and distress levels. The symbol of Baymax is iconic because it represents protection and servitude. Baymax looked out for Hiro like a guardian and aided him in times of struggle. My prototype is fostered toward helping children in their forgetfulness, confidence, and accessibility.

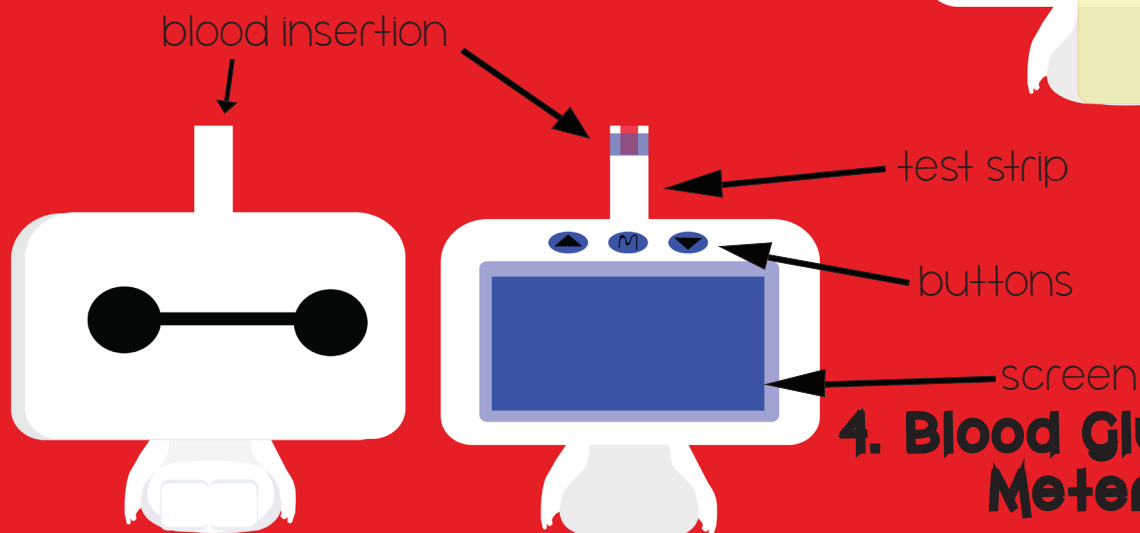

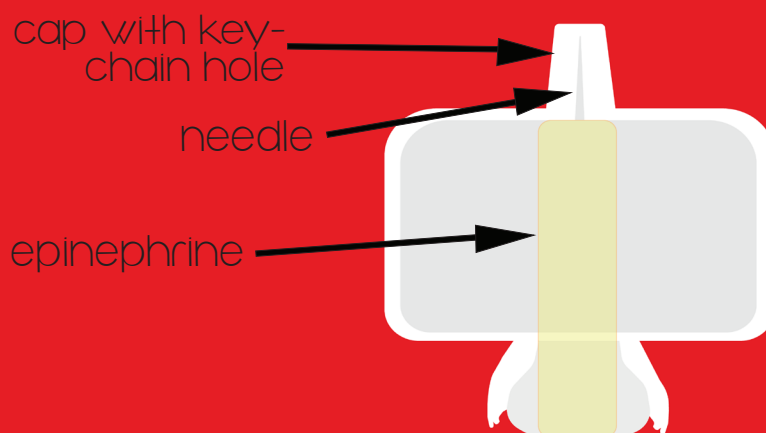

How it works:

1. On-the-go band-aids, safety pins, floss, pills, and more!

2. Asthma Inhaler

3. Allergy EpiPen

4. Blood Glucose Meter
